

**"Buildings should not be demolished.
They should evolve."**

Slide 1

AZRAS

Adaptive Zero-Rebuild Asset System

Building the Next Generation of Long-Life Assets

Build Once. Adapt Forever.

Slide 2

Vision

Buildings Should Evolve, Not Be Rebuilt.

For more than a century, buildings have been treated as disposable products. They are constructed, used, demolished, and rebuilt—consuming enormous amounts of resources, capital, and energy.

AZRAS proposes a different future.

Instead of rebuilding, buildings should continuously adapt to changing technologies, lifestyles, and social needs while preserving their structural value.

We believe that architecture should no longer be viewed as a consumable product, but as a long-term adaptive asset for future generations.

Slide 3

The Challenge

Today's building industry faces fundamental challenges.

- Buildings lose value as they age.
- Renovations often require demolition.
- Construction waste continues to increase.
- Carbon emissions remain significant.
- Existing buildings struggle to adapt to future needs.

The traditional "build–demolish–rebuild" cycle is no longer sustainable.

Slide 4

Our Solution

Adaptive Zero-Rebuild Asset System

AZRAS separates the long-life structural core from replaceable interior systems.

Instead of replacing the entire building, only the components that become obsolete are renewed.

Core Features

- Long-life reinforced concrete structure
- Replaceable interior systems
- Exterior insulation

- Concrete thermal storage
 - AI-ready architecture
 - Digital Twin compatibility
-

Slide 6

Technology Platform

AZRAS combines multiple technologies into a single asset framework.

- Core & Infill Architecture
 - Exterior Insulation
 - Thermal Mass Utilization
 - Circular Construction
 - Modular Renovation
 - AI Integration
 - Digital Twin
 - Lifecycle Asset Management
-

Slide 7

Investment Value

AZRAS is designed to improve long-term asset performance.

Potential Benefits

- Reduced lifecycle costs
 - Lower renovation expenses
 - Reduced demolition waste
 - Lower embodied carbon
 - Higher long-term asset value
 - Greater operational flexibility
-

Slide 8

Market Opportunity

Global demand continues to grow for

- Sustainable Buildings
- ESG Investment
- Smart Cities
- Circular Economy
- Climate-Resilient Infrastructure
- AI-Driven Asset Management

AZRAS aligns with these long-term market trends.

Slide 9

Case Study

Japan Rental Housing Project (2005)

Project Highlights

- Long-life reinforced concrete structure
- Flexible interior renovation
- Reduced lifecycle maintenance
- Improved long-term usability

This project became one of the foundations of the AZRAS concept.

Slide 10

Business Model

Revenue Streams

- Design Licensing
 - Technical Consulting
 - Design Standards
 - Certification Program
 - Digital Twin Platform
 - AI Services
 - Strategic Partnerships
-

2027

International Pilot Projects

2028

University & Research Partnerships

2029

International Design Standards

2030+

Global Licensing & Platform Expansion

Slide 12

Open Innovation

AZRAS is designed as an open platform.

We welcome collaboration with

- Universities
- Developers
- Construction Companies
- Governments
- Technology Providers
- Investors

Together, we aim to establish a new global standard for long-life adaptive buildings.

Slide 13

Join the Future of Building Assets

AZRAS is more than a construction technology.

It is a new philosophy for designing buildings that continue to create value throughout their entire lifecycle.

If you share our vision of transforming buildings into adaptive long-term assets, we invite you to collaborate with us.
